

Jose Arpaia Quintero

Software Engineer

✉ josearpaiaquintero@gmail.com 📍 Panama City 🌐 josearpaiaq.com [in](#) [linkedin](#) [gh](#) [github](#)

Professional Profile

Systems and Computing Engineer with 5 years of experience building web and mobile applications end to end. Focused on the JavaScript ecosystem: React, Next.js, TypeScript and Node.js, with hands-on experience in Angular and Ionic for enterprise mobile delivery. Comfortable owning features from database to UI, translating Figma designs into accessible interfaces, and integrating third-party APIs. Experienced across banking, insurtech, logistics and gaming, working remotely with Agile teams. Ships and maintains personal products in production.

Projects

- World Cup Prediction Pool

Jun - Jul, 2026

Designed, built and operated a company-wide prediction game used daily by 30+ colleagues throughout the tournament. Sole developer and administrator, handling schema design, auth, scoring logic and live deployments during matches.

Stack: **Next.js, TypeScript, PostgreSQL (Neon), Vercel.**

<https://quiniela-wc-2026-lovat.vercel.app/login>
- URL Shortener

2025

Built a link shortening service to work with Go's concurrency model and standard library outside the JavaScript ecosystem.

Stack: **Go, Docker, PostgreSQL.**

Experience

- BlueCore S.A.

Panama City

Software engineer

Nov, 2024 - Present

- Reduced load time of a critical banking module by 85%, from 20 to 3 seconds, by parallelizing requests to legacy backend services.
 - Led frontend design and development of a Bank Data Update Module handling complex multi-step flows, conditional validations and 13+ distinct user profiles, now used by 1000+ customers.
 - Deliver production mobile applications with Angular and Ionic for regulated banking clients in Panama, meeting strict security and compliance requirements.

- Etyalab S.A.

Panama City

Full Stack Developer

Nov 2021 - Nov 2024

- Built and shipped web and mobile products across insurtech, administrative dashboards and gaming, covering the full cycle from conception to deployment.
 - Worked across the stack with React, Vue and Flutter on the frontend and NestJS, Express and Laravel on the backend, adapting to each client's existing architecture.
 - Integrated third-party APIs and built REST services consumed by 10k+ users over several apps.
